

This book is yours

Twenty-five weeks. One a week.

By the end you'll have built something nobody asked you to build.

This book belongs to _____

WEEKS 1-5 · CODING**You start on a screen**

A cat that walks when you tell it to. Your name, dancing. A maze you drew yourself. By Week 5 you'll have a real game, and you'll send it to somebody who doesn't live in this house.

WEEKS 6-10 · MICRO:BIT**Then the code leaves the screen**

A small board with twenty-five red lights that smiles at you, answers you, and rolls dice when you shake it. In Week 9 you'll press a button and a second micro:bit across the house lights up — nothing connecting them but the air.

WEEKS 11-15 · ELECTRONICS**Then you build the circuit yourself**

Two clips and a bulb, and you decided where the electricity goes. Then sound. Then a traffic light running on its own. Then a micro:bit that knows the plant is thirsty before the plant does.

WEEKS 16-20 · 3D DESIGN**Then you make things you can hold**

You'll cut holes through shapes on screen and measure a real object so your design fits it. Then a printer turns your drawing into plastic. The first one won't be quite right — that's why there's a Week 20.

WEEKS 21-25 · INVENT**Then the instructions stop**

Nobody tells you what to build. You'll find ten annoying things, pick one, and build the ugly version out of cardboard and wire. In Week 25 you'll tell a room full of people what problem you solved.

That's the part where you're doing it

A wire comes loose. The print snaps. The thing that worked on Tuesday has no interest in working on Wednesday. That isn't the part where it goes wrong.

That's the part where you're actually building something.

Every page in this book has an **If it breaks** box, because everybody needs one — including the people who build this stuff for a living. Find the loose wire. Fix it. Carry on.
